

UnitValues

Language Specification

Version 1.0.0 (DRAFT)

August 13, 2026

1 Introduction

1.1 Purpose

UnitValues is a set of domain-specific typed languages for numerical quantities. The set consists of two languages:

- `.ut` (unit types) for defining units from fundamental dimensions
- `.uiv` (unit informed values) which import unit types and use dimensional construction to encode numerical quantities

1.2 Scope

This document defines the syntax, semantics, and usage of all constructs in the `.ut` and `.uiv` domain-specific languages.
